

# SEAMLESS FLOORS

## Pellegrino Stone Care offers Seamless Floor Treatment, the ultimate high performance stone floor finish.

Seamless floors have been popular in Europe for many years and are now quickly gaining favor in the US. Traditionally, grout joints are concave and become a reservoir for dirt. Pellegrino Seamless Floors feature tiles and grout that are virtually flush, resulting in a seamless floor that looks fantastic and is much easier to care for.

Tile installers save valuable time & money with Pellegrino Seamless Floor Treatment, they simply install the stone flooring and the Pellegrino Stone Care team properly finish and seal the stone to a superb, uniform finish – leaving the installer free to quickly move on to their next project.

Architects can specify Pellegrino Seamless Floors with confidence, knowing that they are advocating a cutting-edge floor treatment suitable for both classic and modern designs, provided by the most trusted and referred stone care company in San Diego.

Pellegrino Stone Care offers Seamless Floors in mirror-like polished or satin honed finishes.

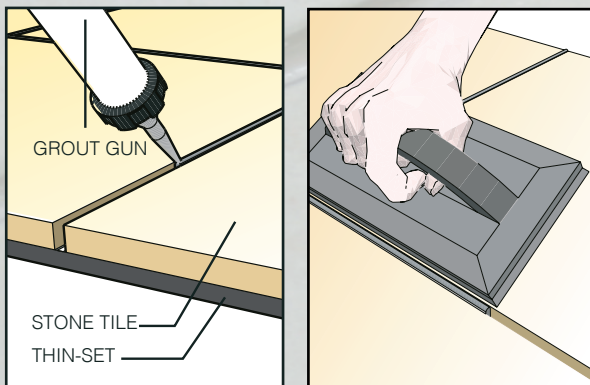

Fig 1. Traditional grout or epoxy grout into joints of a completed installation with a pressurized grout gun or applied directly in the grout joint with a grout float.

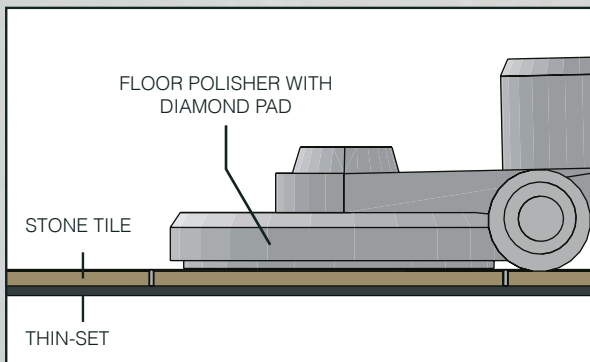

Fig 2. The joints, along with the stone are then honed to create a flush, seamless floor.

The Pellegrino Seamless Floors process entails injecting traditional grout or epoxy grout into joints of a completed installation with a pressurized grout gun (Fig 1), or applied directly in the grout joint with a grout float creating elevated grout joints. The joints, along with the stone, are then honed to create a flush and seamless floor (Fig 2). The grout can be applied by Pellegrino Stone Care or your installer with our guidance and support. Unlike traditional methods, there is no need to spread grout over the entire tile or to cleanup messy excess grout afterwards.

### BENEFITS:

- Reduced cost and frequency of required cleaning, especially cleaning of grout.
- No concave grout joints to harbor dirt.
- The diamond finish condenses and tightens the pours of the stone and grout. Sealant is applied by machine burnishing. This closes any remaining pores, prevents the stone from staining, and facilitates easier cleaning.
- Custom blended grout colors match stone tile perfectly.
- Particularly beneficial in areas when cleanliness is important, such as commercial baths and residential kitchen.
- Reduced time on jobs for tile installers.
- Architects can specify with confidence.

### SPECIFICATIONS:

- For new installations only.
- Available for honed or polished marble, travertine, limestone and onyx.
- Grout widths: 1/32" through 3/8".
- Minimum price; \$3.00 per square foot.\*

*\* Subject to the quality of installation, type of stone and total square footage.*
